Date : 18/04/2022

Location : Bhandira, Murshidabad.

Coordinate : 23.93666 N, 88.02138 E

No. of students participated : 49

Teaching Staff participated: 2

Non-Teaching Staff participated : 0

Time Schedule : 08:00 am to 3:30 pm

Cause:

The main purpose of a survey is to get answers to important questions about the survey subject and to know the opinion of the common people of the survey area regarding the subject to know their problems about the livelihood, agriculture, educational status etc. and try to find solutions of those problems.

Objective:

The primary objective of the field study in Bhandira, Murshidabad, is to conduct comprehensive research and gather valuable data to achieve the following specific goals:

- i. Investigate the socioeconomic conditions of the community in Bhandira, including income levels, access to education, healthcare, and employment opportunities.
- ii. Conducting a field study to assess the environmental conditions in Bhandira can help in understanding the local ecosystem, identifying environmental issues, and proposing solutions for sustainable environmental management.
- iii. The objective could be to study farming practices, crop yields, and challenges faced by local farmers. This could lead to recommendations for agricultural development and support.
- iv. Assess the healthcare infrastructure and services available in Bhandira.

Supervised By: Mrs. Madhuparna Sarkar & Mrs. Saheli Banu

Report :

- i. The majority of the population is engaged in agriculture as their primary source of income. The village has a relatively young population, with a significant percentage below the age of 30.
- ii. Access to quality education is limited, with a majority of children attending schools located in nearby villages. Healthcare services are insufficient, with only one primary health center serving the entire village.
- iii. The road network in Bhandira is underdeveloped, making transportation difficult, especially during the monsoon season. Electricity supply is inconsistent, and many households rely on kerosene lamps for lighting.
- iv. The primary crops grown in Bhandira include rice, wheat, and pulses.
- v. Bhandira Village is surrounded by fertile agricultural land and lush greenery.

Conclusion:

Bhandira Village possesses immense potential for growth and development. However, realizing this potential requires a concerted effort from government agencies, local authorities, NGOs, and the community itself. Collaborative efforts should focus on improving infrastructure, healthcare, education, and sustainable agricultural practices while preserving the village's cultural heritage and environment. The future of Bhandira holds promise, and with targeted interventions and community involvement, we can work towards a more prosperous and sustainable future for this remarkable village in Kandi Block, Murshidabad.
